

**Derek DeHaan**  
**Manager of Hosting Architecture**

**Areas of expertise:**

- Disaster Recovery as a Service
- Multi-Cloud
- Managed Services
- Hosting Solutions
- Security

Derek DeHaan is the manager of Hosting Architecture at OneNeck IT Solutions. He has nearly 15 years of experience in IT architecture, data center design and strategy, and data center migration services. He also spent significant time in the software development space while working to develop a thermal and capacity management software platform.

His career spans a variety of technical and leadership positions with several IT firms. Most notably as a consultant, Derek provided guidance, recommendations and strategic visions for many of the Fortune 500 companies based in the Twin Cities area, including Target, US Bank, Medtronic and Best Buy. Through providing strategic direction to these companies, Derek has helped many organizations make a successful transition into outsourcing some or all their IT needs. Derek has multiple certifications and specializations across a breadth of hardware, software and business application areas.

Derek has a love for sports, pretty much any sport but specifically wake surfing. He spends most of his summer weekends on the lake at his family cabin in western Wisconsin. He really tries to get as much surfing in as possible, despite the short Minnesota and Wisconsin summers. Derek also enjoys playing and watching hockey and wouldn't miss the opportunity to catch a Minnesota Wild hockey game.

Derek earned his Bachelors of Science in Information Technology, with minors in business and accounting, from the University of Minnesota, Twin Cities campus.
