

Database Management

Your business is fueled by information, but your database infrastructure provides the engine

Where would your business be without ready access to data?

Information about customers, contracts, products, parts, delivery schedules and more – data that is critical to your operation – is managed by your database system. It is vital to your business to keep your database applications up to date and operating perfectly. That's why OneNeck Managed Services offers database management solutions.

Database management is complex and can be resource-intensive. Often, database applications require skilled experts with a strong background in database structures and programming to troubleshoot complex database issues. Database integrity and security are essential to your operation, and with OneNeck serving as your database administrator (DBA), you can be confident that your database systems are up-to-date and optimized for maximum performance.

With OneNeck's database management services, your IT staff can devote less time to database maintenance and troubleshooting, freeing them to focus on strategic initiatives that will help expand your business.

OneNeck's team of skilled DBAs are proficient in managing all major databases, including Oracle and Microsoft SQL Server database platforms. Our DBA experts can handle all aspects of database management, including:

- Database administration
- Database patching
- Database upgrades
- Database performance analysis and tuning

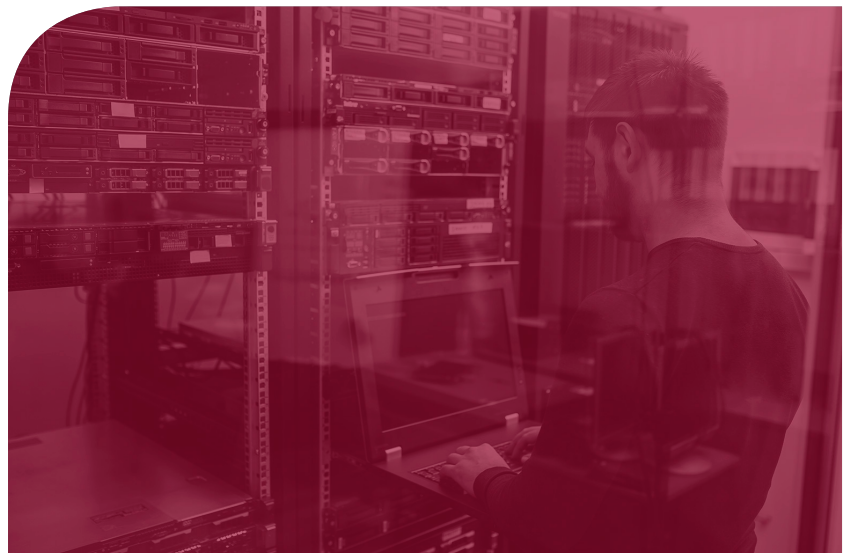

Microsoft SQL Server

Microsoft SQL Server is one of the most widely used enterprise database platforms. Microsoft SQL Server has gained in popularity since Microsoft announced a release of SQL Server compatible with Linux. Of course, embracing open source makes things more complex for SQL Server customers. Customization and specialization are increasingly required to ensure that SQL Server applications are running smoothly, with seamless integration.

OneNeck's Microsoft DBAs have more than 10 years of experience working with Microsoft SQL Server. Our DBAs specialize in supporting multi-tenant, Always on Availability Groups (AOAG). We also are expert at Always Encrypted, Stretch Databases, Dynamic Database Masking, and JSON (JavaScript Object Notation) support.

Oracle

Oracle makes up almost half of enterprise database systems. Oracle's database engines continue to reign as the most popular in the market, and Oracle also is a leader in DBMS (database management systems).

As Oracle users continue to customize Oracle database applications and expand capacity and availability using Oracle Bare Metal Cloud, more integration, customization and performance tuning is required. OneNeck's Oracle DBAs have more than 10 years of experience designing and refining Oracle database systems. We specialize in multi-tenant, RAC, Golden Gate, Active Data Guard, Advanced Security and RMAN (Recovery Management).

Why OneNeck for Database Management

Trust OneNeck's DBAs to handle your managed database services, database patching, database upgrades, fully managed cloud hosting, performance analysis and tuning. We offer:

Uptime SLAs – OneNeck prides itself on providing reliable services. Our uptime SLAs are backed by security, power, and redundancy requirements that not only meet but exceed expectations. All of OneNeck's managed services offer high performance and high-availability and are financially backed SLAs.

Flexibility on demand – Our database management services are fully customizable, tailored to meet specific business needs today, and changing business needs tomorrow.

Frees up valuable in-house resources – In-house IT resources are expensive, and are best used for strategic projects. OneNeck Managed Services relieves your IT team from handling routine maintenance and troubleshooting, leaving them free to focus on mission-critical initiatives.
