

# Disaster Recovery as a Service

## Enabling IT Resilience

In today's 24/7 global business environment, uptime is everything.

Most businesses can't afford to be disconnected from their data for even a day. So when disaster strikes, either man-made or natural, how do you protect your critical IT infrastructure and data without building and maintaining redundant systems? The answer is OneNeck® IT Solutions Disaster Recovery as a Service (DRaaS).

### Preventing Downtime with DRaaS

DRaaS is a service in which you leverage a cloud provider's compute, networking and storage to act as the target site for replication and recovery. With DRaaS, you can avoid the costs of purchasing the infrastructure and software needed for a secondary or tertiary DR site and benefit from flexible and scalable solutions that can grow as your needs change.

### No One-Size-Fits-All

At OneNeck, we understand that each organization is different, and there is no one-size-fits-all approach to DR planning. We will help you design a DR plan and select a DRaaS solution that gives you the confidence to know if the worst happens, you'll be back in business in no time. We will even assist you with running annual mock DR tests to ensure that if a disaster were to occur, your organization is protected.

Our managed DRaaS solutions include expertise and operational support for the following technologies:

- **Azure Site Recovery** – Site Recovery helps ensure business continuity by keeping business apps and workloads running during outages. Site Recovery replicates workloads running on physical and virtual machines (VMs) from a primary site to a secondary location.
- **Zerto** – Zerto's software DR solution is built to protect applications on any virtualized IT environment— be it public, private or hybrid cloud.

### Making Bad Better

When you have the reliability, accountability and expertise of OneNeck managing or providing support for your disaster recovery plan, you have something much more valuable than just the knowledge your data is safe and available should a catastrophic event interrupt your business operations. You have peace of mind. Call today and let us help you create a disaster recovery plan that will protect your business and have you sleeping better at night.
