

OneNeck and Azure SQL

Embrace digital transformation and stay ahead of the curve

To stay competitive in today's marketplace, IT organizations must continuously optimize how they maintain and use the data that fuels their operations.

Modernizing to the cloud as part of a digital transformation can deliver the right mix of operational efficiencies and business enablement to drive continued growth.

Migrating to Azure SQL enables you to embrace digital transformation and stay ahead of the curve.

Azure SQL

Azure SQL Database is Azure's Database as a service (DBaaS). It is an intelligent, scalable cloud database service. In Azure, your SQL Server workloads can run as either as a hosted service (PaaS), or a hosted infrastructure (IaaS). Within PaaS, you have multiple deployment options and service tiers within each deployment option.

OneNeck, Your Trusted CSP

As a Microsoft Cloud Service Provider, OneNeck can help you move or upgrade to Azure SQL, leveraging our proven experience, best practices, automated tools and accelerators, we can:

- Help match the right Azure SQL option for your business requirements. Whether you prioritize cost savings or minimal administration, we can help identify the approach that best delivers against the business requirements you care about most.

- Help you migrate to a cloud environment leveraging our deep industry and technical knowledge of Microsoft applications, specifically Microsoft SQL. Each of our certified DBA's have more than 10 years of experience. You will benefit from the flexibility and efficiency of cloud services, while ensuring your infrastructure is protected, up to date, and running optimally.
- Upgrade your on-premises deployment to the latest version of SQL Server.
- Monitor and manage your Azure SQL deployment, including auto-tuning recommendations and Intelligent Insights that monitor and detect disruptive events that lead to poor performance and potential downtime.

Adopt the most current security and innovation technologies with Azure SQL today!
